Day of Ovulation is considered Day 0. Canine pregnancies last 63 (62-64) days from Ovulation (or 64-66 days from LH surge). Eggs typically take 2 days to mature before they are receptive to sperm. Optimal time of mating is therefore generally considered to be 2-4 days post ovulation or 4-6 days post LH surge. Progesterone testing is the most accurate method of determining timeframes.

** Denotes calculations where the additional Leap Year day of February 29th needs to be taken into consideration. This occurs every 4 years (2000...2016, 2020, 2024, 2028, etc)
